

THE FEED IS EMPTY.

Let's fill it with Smiles.

A performance-creative program for Smile Spirits
[Agency name] · September 2026

WHERE SMILE STANDS

You're winning everywhere except the feed.

386

stores across CA · ID · NV – SaveMart, Ralphs, Stinker, Albertsons, Total Wine

PLATINUM

L.A. Spirits Awards 2026 – blind-judged, unanimous gold votes

2-to-1

outsold the category leader head-to-head at BayFest San Diego

92% ACV

Idaho grocery coverage within three months of launch

And almost nobody scrolling a phone in your markets has ever seen Smile. That's not the weakness. That's the opportunity.

We checked what your competitors are running.

ACTIVE META VIDEO ADS

Cutwater Spirits	0
High Noon	0
Surfside	0
On The Rocks	0
Cayman Jack	0
NÜTRL	2
BeatBox	1

The big brands have ceded the feed.

The only winners on Meta are small independents – running the same handful of ads for over a year.

Junglelee: 418 days on one ad set
HailM: 165 days into a dedicated lander
Nobody pays Meta for a year to run a loser.

Their spend lives in retail, TV and sports. When they touch Meta they link out with no funnel – which is why they never scale it.

Meta ended targeting. **CREATIVE IS THE TARGETING.**

1

The algorithm reads each ad – footage, faces, words – and finds its own audience. Audiences aren't picked anymore; they're discovered, ad by ad.

2

Winning brands feed it volume and variety: dozens of distinct creatives, refreshed continuously. Every new creative is a new targeting experiment.

3

Traditional production can't supply that. A single shoot costs more than a season of AI-produced creative – and takes a quarter, not a week.

Spirits-based RTDs grew 16.4% to \$3.8B in 2025 while hard seltzer declines. The market is moving to your product exactly when the platform rewards the brand with the most stories.

THEIR CAN SAYS
"MALT BEVERAGE."

(brewed like beer, flavored like a cocktail)

OURS SAYS
VODKA.

Don't take our word for it. Read the can.

SMILE SPIRITS™ · 7% ALC/VOL · Please Drink Responsibly · 21+

THE CAMPAIGN PLATFORM

The argument the brand was born to make.

Most canned "cocktails" are malt-based – brewed like beer, dressed in cocktail flavoring, taxed like beer because that's cheaper. The aftertaste people expect from cans? That's the cover-up.

Their can says MALT BEVERAGE.
Ours says VODKA.

"Finally, a REAL Cocktail."

Your line. We weaponize it – always against the category, never a named competitor, closing on proof anyone can check: read the can.

Two tracks. Six campaigns. One brand world.

TRACK 1 – BRAND (the face)

Crack a Smile

Hero story spots – the moment a flat drink nearly ruins a good evening, and doesn't

Flavor Worlds

Five mini-campaigns from their own copy: golf, brunch, night-out, SoCal heat, retro classic

The Coolest Drink Ever™

Personality spots that earn shares – deadpan-literal on their own trademark

TRACK 2 – PERFORMANCE (the engine)

Read the Can

The malt-vs-vodka argument, ending on the proof anyone can check in-store

Proof Carousels

The category's longest-surviving format: medal, quotes, label close-up – real photography

Proof / Retargeting

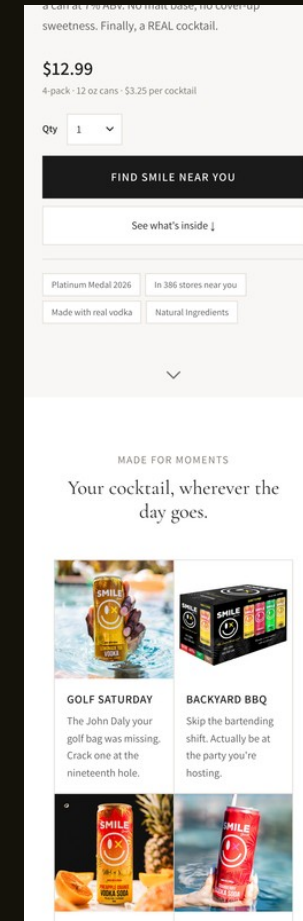

Platinum medal, BayFest 2-to-1, founder provenance for warm audiences

Plus the landing page.

Every winning advertiser in this category sends traffic to a dedicated page it owns. We build Smile's from the pattern proven by the category's longest-running ads – store locator front and center. The unit is ad + page, instrumented end to end.

CREATIVE – BUILT WITH THE REAL PRODUCT

It already exists. This is not a mock-up.

THE LANDER – LIVE NOW

robpalmer99.github.io /smile-preview

Swiped from the structure of the category's 165-day winning page. Real photography. Locator first.

PROOF CAROUSELS – real can photography, zero AI imagery

VIDEO – two finished spots + feed-length cutdowns

“John Daly” golf story (49s + 16s cut) and “Read the Can” told by the can itself (62s + 20s cut) – real label art in every product frame, two designed brand voices, word-synced captions. Under \$10 each.

WHY WE CAN DO WHAT AGENCIES CAN'T

The production engine.

\$5-15

production cost per finished ad
variant

~27 ads

full launch matrix for less than one
hour of a traditional shoot

Same week

new concept to finished 30-second
spot – not next quarter

Research → scripts → storyboards → AI generation → edit → compliance QC, with human creative direction at every gate.

Volume without slop: every frame is checked against brand, casting and compliance rules before it renders – defective frames are regenerated, never shipped. Winning ads spawn variants (new casts, occasions, seasons) in days, feeding Meta the variety it now rewards. And the system is self-improving: every lesson becomes a written rule applied to all future work.

Compliance is engineered in, not reviewed in.

- ✓ 21+ targeting enforced at the ad-set level; age-gated destinations verified in the click path
- ✓ DISCUS standards throughout – everyone depicted reads 25+, moderation always, no consumption around driving or sport
- ✓ TTB ad mandates (brand, ABV, responsible party) on every end card, “Please Drink Responsibly” on every ad
- ✓ State-aware promotion mechanics for CA · ID · NV; no retailer naming – traffic routes to Smile's own locator
- ✓ No fake or AI-fabricated testimonials, ever – proof comes from the medal, the festival, the label

For a brand your size, an agency that leads with compliance removes the biggest hidden risk of hiring small.

Measuring without pretending.

Retail brands can't trace ads to register receipts – and we won't fake it. We instrument what's real:

PRIMARY

Store-locator clicks – “Find Smile near you”, mapped against all 386 doors by region

ACTIONS

QR + promo-code redemptions (state-compliant mechanics) and email capture

CREATIVE

Per-ad hook-retention curves – the data that decides what scales

REACH

21+ reach & frequency in CA · ID · NV; brand-search volume as the awareness echo

BUSINESS

Monthly overlay: your retail sell-through by region against our spend map

Measurement honesty is a differentiator – you've already heard agencies promise attribution they can't deliver.

Four weeks to real numbers.

W0 · PRODUCE

~27 creatives (video + carousels) + the dedicated landing page

W1 · LAUNCH

Broad 21+, CA + ID, equal budgets – no verdicts before the statistical floor

W2 · PRUNE

Kill bottom half on retention + locator CTR; spawn variants of the top five

W3 · SCALE

Budget follows cost-per-locator-click; YouTube joins with the two best hooks

W4 · REPORT

Winning angles, unit costs, and the Q4 scale plan

Test media budget: \$[10-15k] across the flight.

Q4 runway ready behind it: Espresso Martini and “Red Angel” Cranberry own the holidays while the category sleeps until spring.

Live within 10 days of a yes.

Investment: [flat creative + management fee for the flight, then retainer + % of spend at scale]

1

Can & label artwork and brand assets

2

Store-locator access for tracking; promo-code mechanics sign-off

3

One brand-approval contact – 48-hour creative turnaround

Then the emptiest feed in beverage starts filling with Smiles.

APPENDIX – SOURCES

- Ad-intelligence audits Sept 23-25 2026: Meta Ad Library video sweep + paid longevity sweep (raw captures on file)
- Category: Grand View Research / Forbes RTD data 2025-26; Spirits Business seltzer-decline reporting
- Smile footprint: store-locator data (386 doors – CA 181 / ID ~120 / NV 7); Idaho ACV per brand
- L.A. Spirits Awards 2026 results; BayFest sell-through per brand
- Compliance: Meta alcohol policy (21+ US); DISCUS Code (73.8% LDA placement); TTB 27 CFR Part 5 Subpart N; CA ABC coupon & tied-house rules; ID low-proof retail framework
